

Natural Writing: From Mechanical to Clear

BEFORE & AFTER | TONE & READABILITY

Sample brief

A fictional software team needs a clearer customer-facing explanation of a weekly planning template. The original below was intentionally written in a mechanical style for this demonstration; it is not evidence of any AI-detection result.

Before | mechanical draft

In today's fast-paced work environment, effective task organization is of paramount importance. Our weekly planning template is designed to facilitate the strategic allocation of responsibilities by enabling users to identify three key priorities, assign a responsible individual to each task, and record relevant deadlines. It is important to note that the template does not automatically send reminders. Users are encouraged to undertake a review each Friday and make the necessary modifications for the subsequent week. By utilizing this structured approach, teams can enhance the visibility of their planned activities.

After | natural revision

A useful weekly plan makes the next steps easy to see.

Use the template to choose three priorities, name the person responsible for each task, and add the deadlines. Review it on Friday, then update it for the week ahead.

The template does not send reminders, so keep using your usual calendar or reminder tool. It gives the team one place to see what is planned and who is doing what.

Meaning-preservation check

Kept: three priorities; a responsible person for each task; deadlines; Friday review; updates for the following week; no automatic reminders; visibility of planned work.

Changed: removed the generic opening, replaced abstract nouns with verbs, shortened sentences, and made the limitation easier to find.

Scope note

This service improves tone and readability. It does not promise to bypass AI detectors, conceal prohibited AI use, or establish authorship. Any client disclosure or attribution requirements still apply.
